

## Weapon

Could even have 3 or four?  
one at each corner

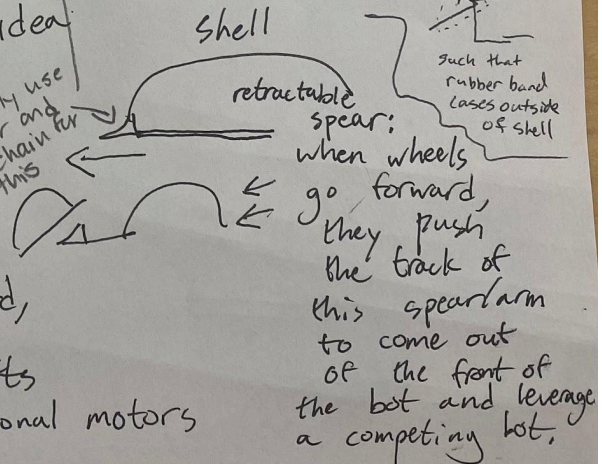

triggered by a bump from opponent  
into our armour  
trip wire-esque

We need  
to find a  
way to turn  
rotational  
motion into  
linear motion

Other  
idea

possibly use  
gear and  
chain for  
this

attach arm to wheels in such a way that when the wheels go forward, the arm closes down/lifts up (can't use additional motors)
